

Eric Huang

Staff-track Product Designer · Agentic / enterprise AI UX

(778) 680-2897 · eric.chakho.wong@gmail.com · Portfolio: erichuang1005.github.io/ericwork (PW: Corgi)

End-to-end UX for complex enterprise workflows and agentic products, from interaction model to working prototype: configuration consoles, trust patterns, and human-in-the-loop controls for AI-driven automation.

EXPERIENCE

Workday | Senior UX Designer, Financial Design 2022 – Present

- Led UX for Workday Intake Agent, an enterprise governed procurement agent, with Agent Factory PMs: conversational inputs over modal flows, catalog top-3 + expand over full-catalog dumps, policy/recipe admin with citation integrity, and agent-boundary redirects for misrouted requests; owned requester-approver-admin surfaces end to end across EA-to-GA releases.
- Shipped code to the repo as a top-3 frontend contributor across 21 handheld inventory tasks, rebuilding airy desktop-proportioned screens into dense scan-driven flows with Cursor and React; use AI coding tools as a creative partner in daily design practice.
- Led design of a policy compliance console, replacing manual, error-prone configuration with guided workflows; cut configuration time 94% with 100% task completion in usability testing, built for AI-driven automation with clear human oversight.
- Shipped production-ready designs developers build on directly for full-stack development, working in the design system's GitHub repo: pull production components to build and iterate, contribute improvements back, and publish via GitHub Pages.
- Partnered with US public sector and healthcare customers to translate regulatory requirements into shippable design.
- Mentor designers via ADPList (1,000+ min); mentees placed at Workday and other companies.

Diligent | UX Designer 3, Admin Experiences 2021 – 2022

- Redesigned role-based access provisioning workflows, cutting admin task time ~70% through clearer, error-reducing interaction design for identity and permissions.
- Established a cross-product design system for admin workflows, standardizing patterns and enabling consistent, high-quality experiences across product surfaces.

Copperleaf | Product Designer 2 2019 – 2021

- Designed a workflow configuration tool for enterprise admins, enabling complex, multi-step asset evaluation processes to be set up and managed without engineering dependency.

SKILLS

Figma · Design engineering (React, GitHub) · AI coding tools (Cursor) · Agentic / AI product UX · Human-in-the-loop design · Interaction design · Design systems · Usability testing · Visual design · Cross-functional leadership

EDUCATION

Master of Digital Media, University of British Columbia, 2019

Bachelor of Arts in Communication, Beijing Normal University, 2015

AWARDS

Social Impact Award, UBC/SFU Venture Connection
