

Eric Huang

Senior Product Designer (Principal scope) · 10 years in product design, 8 in enterprise. End-to-end UX for agentic, compliance, and admin-heavy products, from interaction models and systems to production launch.

Workday - Financial Design | Senior UX Designer | 2022 - Present

- Led end-to-end design for agentic procurement experiences (Intake Agent, cross-agent orchestration), establishing interaction models, trust patterns, and human-in-the-loop controls from discovery through launch.
- Partnered with US public sector and major healthcare organizations during product ideation and design validation, translating complex operational requirements into testable concepts and shippable design.
- Led design of a policy compliance console, transforming manual, error-prone configuration into guided, scalable workflows that support AI-driven automation with clear human controls. 94% faster to set up rules; 100% task success in usability tests.
- Built a pro-user component library (tables, dashboards, navigation, action bars) for data-dense admin surfaces, extending an existing design system to serve power users with accessibility and visual consistency at scale.
- Designed handheld inventory UX on Zebra scanners across 21 tasks — adapted Canvas Web in code (Figma specs to production tokens, 9 PRs merged) so scan-to-confirm stayed consistent on constrained hardware.
- Mentored designers internally and via ADPList (1,000+ min), mentees placed at Workday (P2) and multiple external companies.

Diligent - Admin Experiences | UX Designer 3 | 2021 - 2022

- Redesigned role-based access provisioning workflows—reducing admin task time by ~70% through clearer, error-reducing interaction design.
- Established a cross-product design system for admin workflows, standardizing patterns, reducing interaction friction, and enabling consistent, high-quality experiences across multiple product surfaces.

Copperleaf | Product Designer 2 | 2019 - 2021

- Designed a workflow configuration tool for enterprise admins—enabling complex, multi-step asset evaluation processes to be set up and managed without engineering dependency.
- Extended the design system library with reusable, interactive components (including drag-and-drop interactions), accelerating prototyping and improving visual and interaction consistency across admin surfaces.

SKILLS

Interaction design · Visual design · Design systems · Prototyping · Usability testing · Generative & evaluative research · Strategic thinking · Cross-functional leadership · Design thinking · React (UI build) · Agentic / AI product UX · HTML, CSS, JavaScript

EDUCATION

Master of Digital Media | University of British Columbia | 2019

Bachelor of Arts in Communication | Beijing Normal University | 2015

AWARDS

Social Impact Award | UBC/SFU Venture Connection
